

ARCHIVE/DUPLEX[®]

Product Description

Mainframe Utility

ARCHIVE/DUPLEX, offered as an individual add-on product or as a part of Technetron Duplex Subsystem (TDS), enhances the CA-IDMS[®] system environment. Its creation of a mirror copy of CA-IDMS journal archives at the same time as the primary archive is produced by the IDMS archive journal utility ensures efficiency involving offsite processing or manual recovery procedure. Since duplex archives can be utilized in the same exact manner as their primary counterpart, the extra set of journal archives not only guarantee the manual recovery process but also reduces the recovery time when both archives are applied simultaneously.

Current Level: Release 5.1

Type of License: CPU/SITE

Installation: User, 30 Day Trial

Highlights

- Operates as a standard CA-IDMS/DB user exit
- Selective mirroring controlled by Job Control Language
- Parallel construction of duplex archives with the primary archive
- Fully integrated with JOURNAL/DUPLEX[®]
